### **WHAT’S BEEN HAPPENING**

#### **From our Regular Meeting, January 5, 2010**

A regular meeting was held at the Manchester Activities Building. There were 15 club members and one guest in attendance.

The speaker for the evening was Steve Allgeier, a Home Horticulture Specialist from the University of Maryland Extension Office of Carroll County. His informative talk addressed Stink Bugs, local farming and upcoming events. Stink Bugs will be worse next year and there is no safe way to eradicate them. They are harmful to corn, soy, peas, and beans. This will cause an increase in food costs.

Grubs will not be a problem next year. Save money and don't buy grub control products this year.

**The Carroll County Master Gardeners will be holding a series of spring lectures from March 8 - April 19. Topics include, "Work Smarter not Harder", "Introducing Sound to Your Garden", "Protecting Kids and Pets from Toxic Plants", "From Seeds to Food with Heirlooms", "The Art of Bonsai", "Gardening in Small Spaces". Lectures are \$10.00 each or all 7 for \$50.00. Contact Steve at 410-386-2776 or [hortman@umd.edu](mailto:hortman@umd.edu) if you are interested.**

**Classes on "Grow it, Eat It" and "How Do You Start and Grow a Vegetable Garden" will be held at the Carroll County Extension Office in Westminster. Cost is \$5.00 each. Contact Steve at 410-386-2776 or [hortman@umd.edu](mailto:hortman@umd.edu) if you are interested.**

### Find Your Own Path

French entomologist Henri Fabre once conducted an experiment that illustrates why it's best to follow your own lead rather than that of the crowd you're in with. Fabre's test subjects were processionary caterpillars, wormlike creatures that travel in a line head to tail with no clear sense of a destination. Their path is determined by the "leader" ahead of them.

Fabre lined the rim of a flower pot with an unbroken chain of caterpillars. Inside the pot, he placed a plethora of food. Without breaking the chain, the caterpillars began their slow track around the rim of the pot. There was no way to distinguish the leader in this group, and the caterpillars kept moving around the rim of the pot at a steady pace.

After several days, the caterpillars – that had never stopped their trek—began to die and fall off the rim. All the while, the food they needed lay inches away. This thoughtless mass of movement lacked even the most basic instincts to allow them to change their behavior in order to survive.
